"using" static Directive

- by Harsha Vardhan

"Using Static" Directive

- The "using static" directive allows you import a static class directly from a namespace; so that you can directly access any of its methods anywhere in the current file.
- Use the "using static" directive to access methods of static class easily, without repeating the class name each time.

"Using Static" Directive – Syntax

```
using  static Namespacename.StaticClassName;
```
