Action

- by Harsha Vardhan

Action

- "Action" is a pre-defined delegate, which can be used to create events quickly, similar to "Func".
- The difference is:
- Func must have return value; Action don't have return value.
- Action must have 0 to 16 parameters.
- Advantage: You can create events quickly and easily based on Action, instead of creating your own delegate.

Creating Event Based on Action
public event Action<Param1DataType, Param2DataType, Param3DataType> EventName;

Can be 0 to 16 parameters

[No return value]
